About Phiequipe

**We can engineer your style.
We can design and engineer
your ideas.**

Our activity was born in 1997 in Automotive engineering field and it rapidly developed itself also in Nautical field.

Actually, Phiequipe team is composed of people with different background: engineers, architects, designers and technical specialists. Our mixed team is our strenght and this allowed us to outline the double soul of the company: Engineering and Design.

Those two souls converge in a common heart: Phiequipe Italian Motorboats.

Phiequipe Italian Motorboats is a line of compact and agile boats intended as high-end yacht tenders or comfortable and elegant day cruisers.

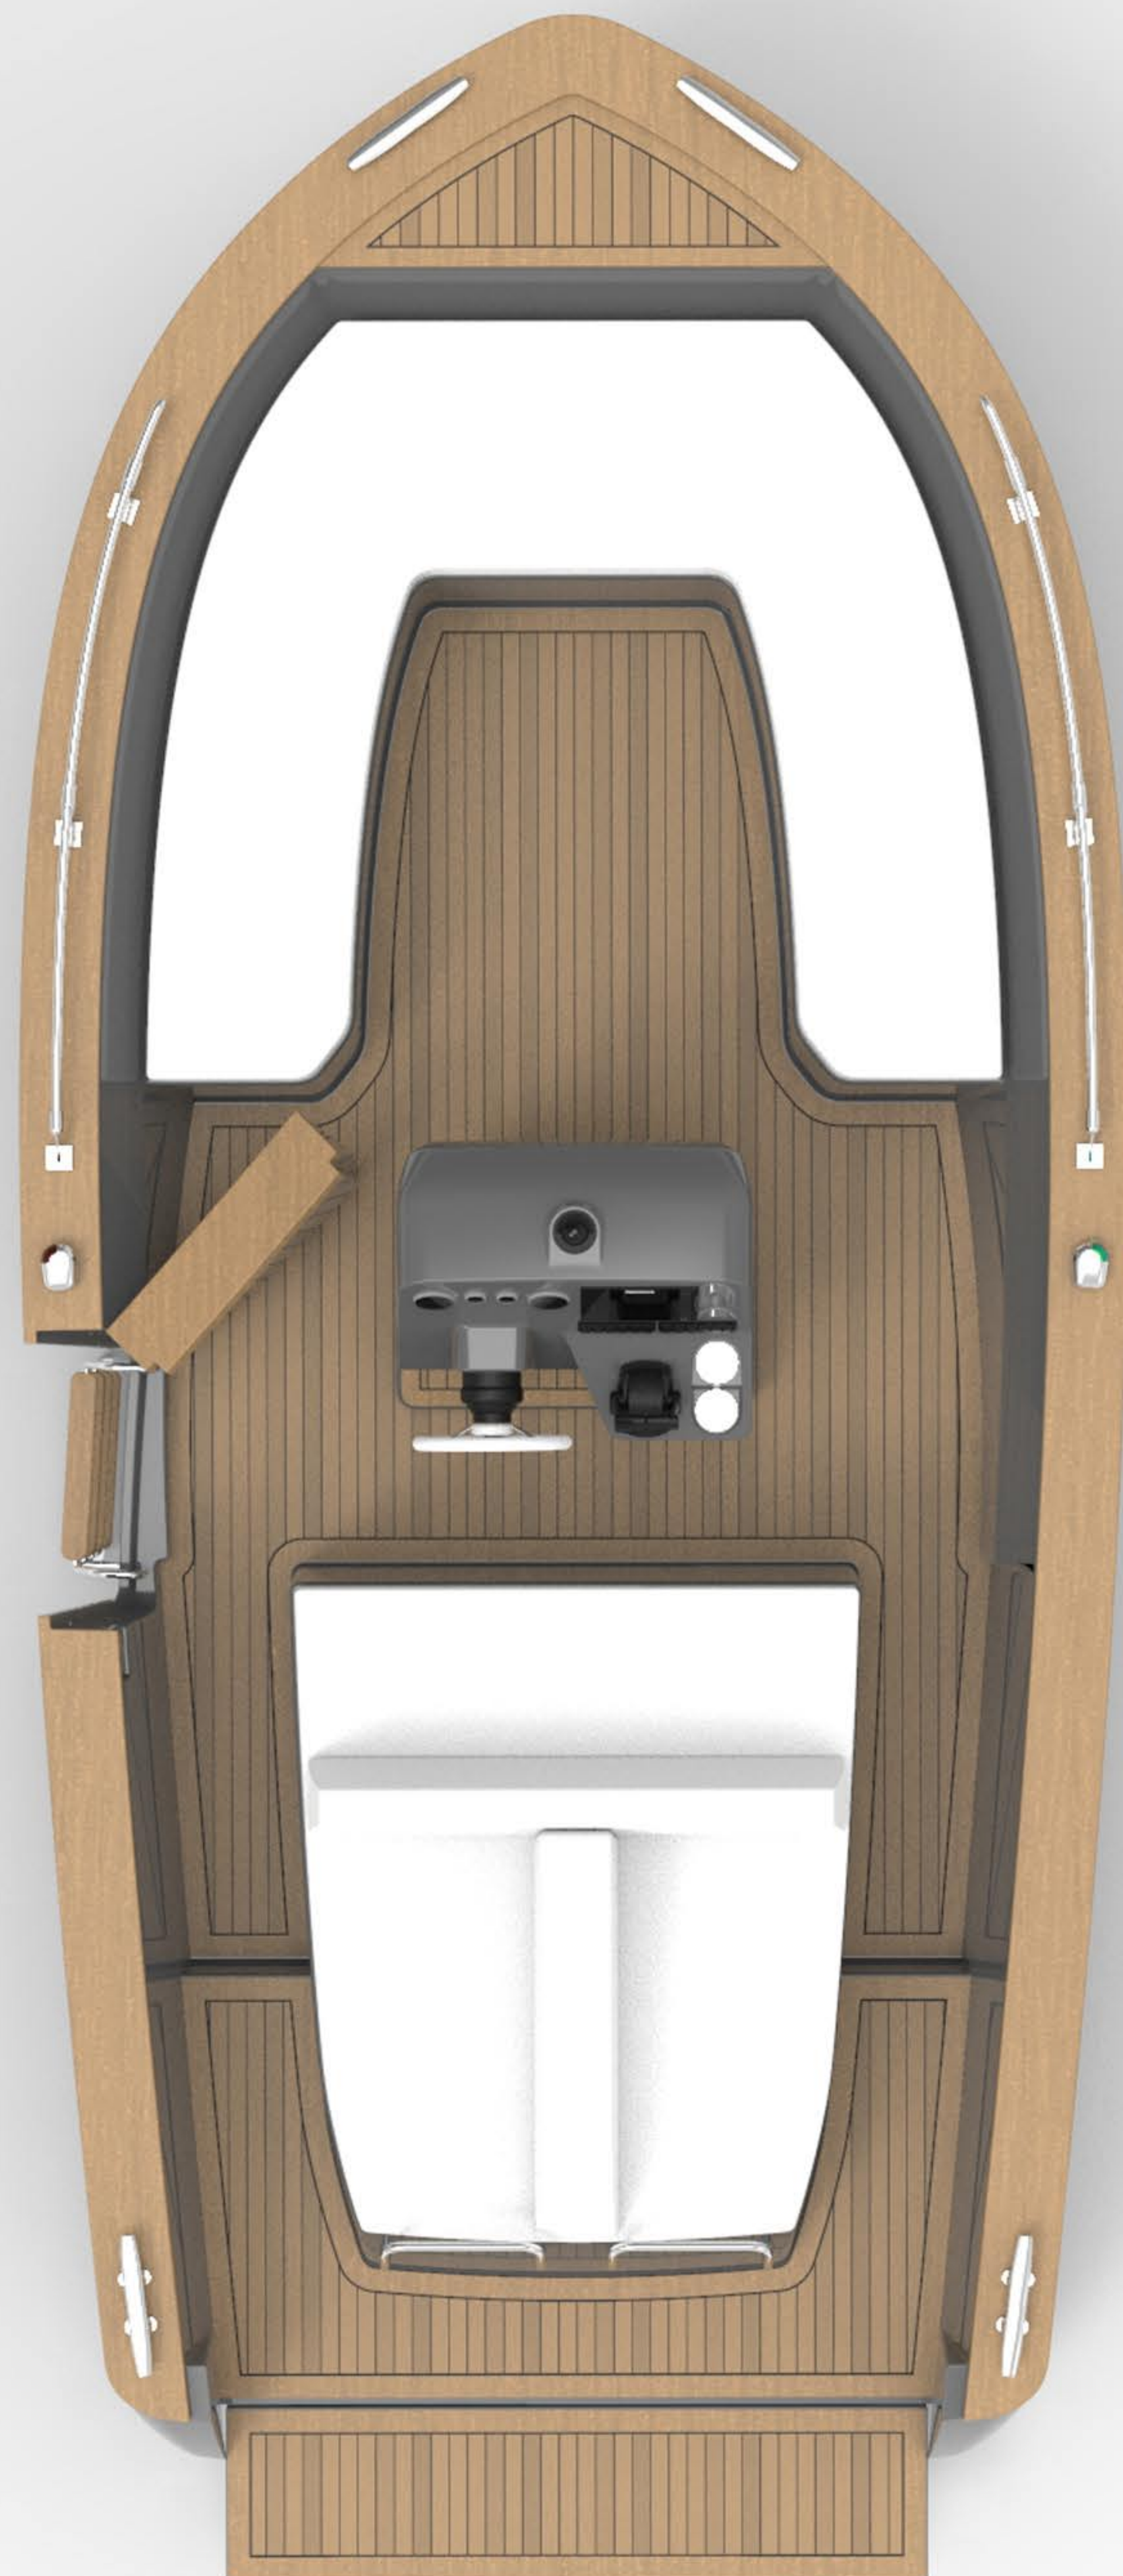

Quality, reliability, value: our motorboats!

Phiequipe Italian Motorboats's design is based on the concept of the luxury tender, a meticulous attention for details, refined materials such as teak, leather and stainless steel.

An accurate study of the ergonomics, maneuverability and stability confers to our whole range of boats an elegant and sophisticated look, as well as enhanced performance and comfort while sailing.

Phiequipe Italian Motorboats offers three main layouts, a center console version for a more classic approach to sailing and a "motorcycle-like" saddle for different and fun steering sensations.

The materials and colours are customizable to fit the standards and requirements of our customers.

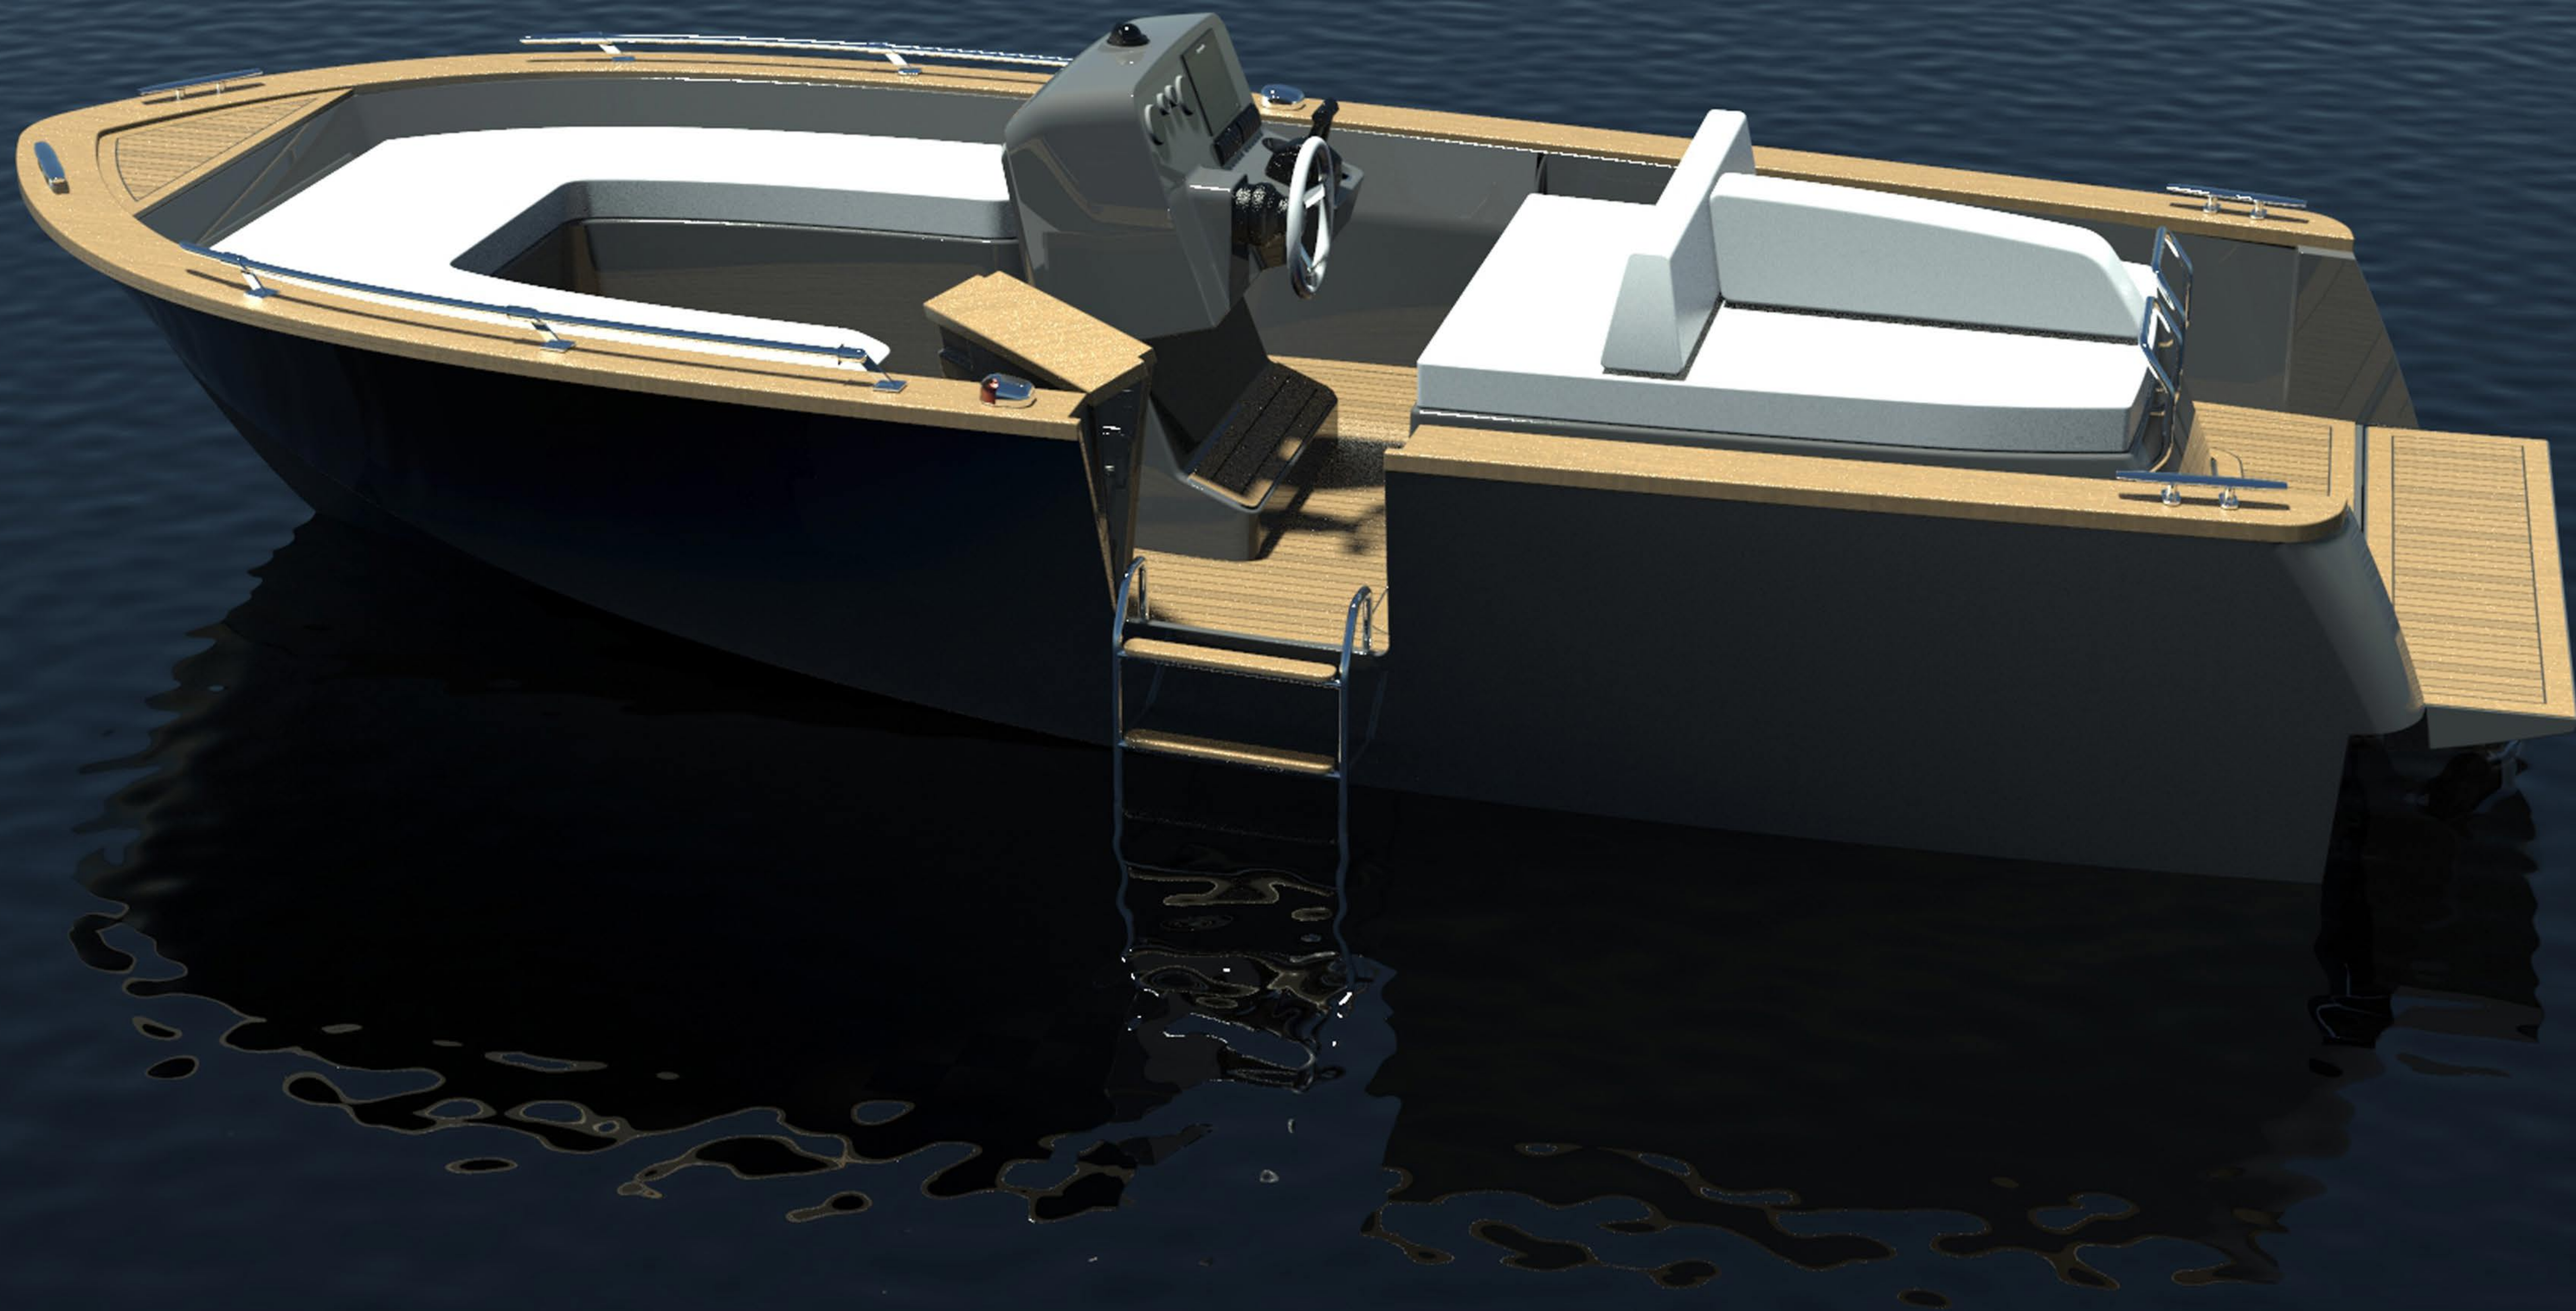

Levriero Range

The new born: MB19 Jet Levriero

MB19 Jet Levriero is an elegant tender used also as a day cruiser, completely made in Italy. Our team - composed of engineers, designers and shipyard artisans with a long experience in building top boats - works everyday closely together to transform their ideas into reality.

Thanks to her specific layout and to adopted technical solutions, the size of center console can be reduced tipping it over before storage in the garage. The opening stern and the side door allow to the crew an easy access to the sea or land. Main common characteristics of the Levriero models remain, such as the flair shape of the hull's bow and the convivial area of the bow sofas, which can be transformed in a spacious sundeck with an additional central cushion. In the stern area, there is a further large sunbathing area which, thanks to the removable central cushions, can be easily transformed into a seat during navigation.

Its stability and easy maneuverability offer an excellent comfort sensation by sailing whether to experienced sailors or novices.

Elegant, powerful, agile

The elegant sporty retro-modern look is inspired in classic sport cars. The wooden decking, the stainless steel details and carefully selected materials of the highest italian quality for upholstery confers it a very sophisticated and refined aspect.

We are working constantly to raise the quality of our boats and to get closer and closer to the needs and wishes of our shipowners.

Technical Specs

engine	YANMAR Diesel Jet
crew	5 people
LOA	6,00 m
design cat	D
Lh	5,50 m
dry weight	1420,0 kg c.a.
Bmax	2,45 m
